TORCH-VISION MODELS

LATEST SUBMISSION GRADE

100%

1. What do the following lines of code do: `1 / 1 point`

```
1    model = models.densenet121(pretrained=True)
2    for param in model.parameters():
3        param.requires_grad=False
```

⦿ The following lines of code will set the attribute requires_grad to False. As a result, the parameters will not be affected by training.

◯ set the number of classes for a pertained model

✓ **Correct**
correct

2. The last layer of our pertained model is given by   `1 / 1 point`

```
1    model.classifier=nn.Linear(1024,7)
```

Hoe many classes does our model have

> 7

✓ **Correct**
correct
